

## About Us

The founders of MOLDMAN™ MACHINES realized early on that there was a strong need for an alternative to potting of electronics. Low Pressure Injection Molding was already a trusted replacement for potting in Europe. As a result The Cavist Corporation was incorporated in 1998.

It was soon realized that better and more efficient equipment, was needed for this emerging LPM electronic encapsulation process. The most efficient and user friendly equipment was then developed. The engineers at MOLDMAN™ MACHINES performed in-dept studies to fully understand how to process the adhesive Polyamide materials. The results of this study gave them the foundation to develop the best possible Low Pressure Injection Molding machines in the market. As a testimony to the quality and efficiency of our MOLDMAN™ MACHINES, patents are held in USA as well as in Europe.

The knowledge that was gained on processing adhesive molding materials is also used to support our customers. We can help develop the best and most unique solutions for any given application. In 2008, MOLDMAN™ MACHINES was transformed from a brand to a company all its own.
